

**ONCOR ELECTRIC DELIVERY COMPANY LLC
PUBLIC PARTICIPATION MEETING FOR THE PROPOSED
EL CAPITAN SWITCH – DRY LAKE SWITCH 345 kV TRANSMISSION LINE PROJECT
CULBERSON AND REEVES COUNTIES, TEXAS**

TUESDAY, OCTOBER 21, 2025

REEVES COUNTY CIVIC CENTER
1500 S. CEDAR STREET
PECOS, TX 79772

5:00 PM – 6:30 PM

1. In your opinion, has the need for the project been adequately explained to you?
Yes _____ No _____

How could we have improved this effort?

2. Were the exhibits and explanations of the need for the project helpful to you?
Yes _____ No _____

How could we have improved this effort?

3. Was the information presented helpful for your understanding of the project?
Yes _____ No _____

4. The Public Utility Commission of Texas and the Texas Utilities Code require that several factors be considered when routing an electric transmission line. The following list includes factors required for routing consideration as well as additional factors relating to possible engineering constraints:

- Proximity to single-family and multi-family dwellings and related structures, mobile homes, apartment buildings, commercial structures, industrial structures, business structures, churches, hospitals, nursing homes, and schools;
- Proximity to commercial radio transmitters, microwave relay stations, or other electronic installations;

- Proximity to parks and recreational areas;
- Proximity to FAA-registered airports, private airstrips, and heliports;
- Proximity to historical and archeological sites;
- Proximity to agricultural areas irrigated by traveling irrigation systems;
- Proximity to environmentally sensitive areas; and
- Protected or endangered species.

Halff Associates, Inc., an environmental and routing consultant, has plotted these features that we know about on the Environmental and Land Use Constraints Map presented at this meeting. To your knowledge, are those features shown on this map accurately plotted? Yes___ No___

Are you aware of any of these features that are not presently shown or are incorrectly located on this map? Yes___ No___

If so, please help us identify the approximate location of any missing or incorrectly located features in the space below.

5. The routing of a transmission line includes consideration of land use factors including the following. Please rank the following factors in order of importance to you. Indicate the most important factor with a number 1, the second most important with a number 2, and so on.

- | | | |
|-------|----|--|
| _____ | a) | Minimize the overall length of the line |
| _____ | b) | Minimize the length across cultivated land |
| _____ | c) | Minimize the length across pastureland |
| _____ | d) | Minimize the length across road frontage |
| _____ | e) | Minimize the length across residential areas |
| _____ | f) | Minimize the length along wooded areas |
| _____ | g) | Minimize the visibility of the line |
| _____ | h) | Other (please specify below) |

6. The routing of a transmission line also includes consideration of paralleling and/or utilizing existing corridors (e.g., existing transmission line and roadway corridors). Please rank the following existing corridors that are found within the project study area that you would prefer the new transmission line to parallel and/or use. Indicate your first preference with the number 1, your second preference with the number 2, and so on.

- | | | |
|-------|----|--|
| _____ | a) | Maximize the distance along existing transmission line corridors |
| _____ | b) | Maximize the distance along existing roadway corridors |
| _____ | c) | Maximize the distance along existing railroad corridors |

- _____ d) Maximize the distance along existing property boundaries
_____ e) Other (please specify below)

7. The routing of a transmission line also includes consideration of the distance to habitable structures and community resources. Please rank the following in the order that you would prefer to maximize the distance from the proposed transmission line. Indicate your first preference with the number 1, your second preference with the number 2, and so on.

- _____ a) Maximize the distance from residences, including
single-family and multi-family dwellings
_____ b) Maximize the distance from commercial,
industrial, and/or business structures
_____ c) Maximize the distance from churches
_____ d) Maximize the distance from hospitals
_____ e) Maximize the distance from nursing homes
_____ f) Maximize the distance from schools
_____ g) Maximize the distance from parks/recreational areas
_____ h) Maximize the distance from historical and
archeological sites
_____ i) Other (please specify below)

8. In your opinion, are there any other factors or features that should be considered in determining the location of the proposed transmission line?

Yes _____ No _____

If so, please list them in the space below.

9. How did you learn about this open house?

10. Which of the following applies to your situation?

- _____ a) Proposed line route is near my home
_____ b) Proposed line route is near my business

- Name _____
- Address _____
- City/State _____ Zip Code _____

- [illegible]

[illegible]

Thank you for your comments.
